

Log4J Task

By Joshua Edwards

“**Log4shell** is a critical vulnerability in the widely-used logging tool **Log4j**, which is used by millions of computers worldwide running online services. A wide range of people, including organisations, governments and individuals are likely to be affected by it. Although [fixes have been issued](#), they will still need to be implemented.” - <https://www.ncsc.gov.uk>

Some Affected Software – Lists used for information
